WORK EXPERIENCE

Associate Software Development Engineer at NTT Data, Remote

June 2024 - Present

- Modernizing Nebula, a cloud billing and provisioning platform for NTT affiliates, enhancing Azure subscription management, usage aggregation, and cost reporting.

Software Developer Intern at Seovigil (powered by Botpresso), Remote

January 2024 - June 2024

- Led the development of an internal admin platform which is meant to improve data collection on user registrations, income generation, and other areas essential for analytical and business decisions.

Web Application Developer at Ginger Partners, Remote

October 2023 - January 2024

- Led the development of API endpoints and a user-friendly interface which led to 80% efficiency increase.
- Developed an Applicant Tracking System (ATS) that generates candidate reports and assigns a calculated score to each candidate using internal business logic.

PROJECTS

EZNotify

Building [here](#)

- Building EZNotify, a notification service that lets users register event triggers and deliver notifications (via Slack, email, push, etc.) to target destinations. Currently in development and accepting early users via waitlist.

DecodeMyCode (Next.js, Node.js, OpenAI API, MongoDB, React)

Hosted [here](#)

- Built DecodeMyCode, a SaaS tool that translates arbitrary code into plain-English explanations, line-by-line breakdowns, and interactive flowcharts.

AI Portfolio Chatbot (Next.js, React 19, MongoDB, Vertex AI, Groq, LangChain)

[Github](#) | Hosted [here](#)

- Created an AI chatbot for my portfolio site that answers visitor questions using vector search, embeddings, and contextual NLP to deliver personalized, interactive responses.

Meshery - Open source contribution (HTML, CSS, Javascript)

[Github](#)

- Resolved responsiveness issue related to filtered catalog results, which were not within device dimensions.
